

Electromagnetic Flow Meters

ModMAG® M3000

DESCRIPTION

The innovative design of the Badger Meter® ModMAG® M3000 meter represents the next generation of electromagnetic flow meter technology. Incorporating the latest developments in micro processing signal conditioning the advanced design of the M3000 meter allows an accuracy \pm 0.20% with a flow range of 300:1. Targeted to a variety of oil and gas, industrial and municipal applications, the M3000 meter is virtually unaffected by density, temperature, pressure, and viscosity changes and provides an accurate and reliable long term metering solution. This meter complies with ANSI/NSF Standard 61, Annex G.

OPERATION

The operating principle of the electromagnetic flow meter is based on Faraday's law of magnetic induction: The voltage induced across any conductor, as it moves at right angles through a magnetic field, is proportional to the velocity of that conductor. The voltage induced within the fluid is measured by two diametrically opposed internally mounted electrodes. The induced signal voltage is proportional to the product of the magnetic flux density, the distance between the electrodes and the average flow velocity of the fluid.

ELECTRODES

When looking from the end of the meter into the inside bore, the two measuring electrodes are positioned at three o'clock and nine o'clock. As a conductive fluid flows through the magnetic field, a voltage is induced across the electrodes. This voltage is proportional to the average flow velocity of the fluid and is measured by the two electrodes. This induced voltage is then amplified and processed digitally by the converter to produce an accurate analog or digital signal. The signal can then be used to indicate flow rate and totalization or to communicate to remote sensors and controllers.

M3000 meters also have an "empty pipe" detection feature. This is accomplished with a third electrode positioned in the meter between twelve o'clock and one o'clock. If this electrode is not covered by fluid for minimum of five seconds, the meter will display an "empty pipe" condition. When the electrode again becomes covered with fluid, the error message will disappear and the meter will continue measuring.

DETECTOR

The flow meter is a stainless steel tube lined with a non-conductive material. Outside the tube, two DC powered electromagnetic coils are positioned opposing each other. Perpendicular to these coils, two electrodes are inserted into the flow tube. Energized coils create a magnetic field across the whole diameter of the pipe. With the no moving parts, open flow tube design there is no pressure lost and practically no maintenance required.

APPLICATION

The M3000 meter is suited for use in applications where indication of rate and totalization is required. The ability to display flow parameters locally at the flow meter, or remotely by mounting the amplifier up to 100 feet away from the detector, provides a versatile solution for most industrial and municipal flow applications. Whether the fluid is water or something highly corrosive, very viscous, contains a moderate amount of solids, or requires special handling, the meter is able to accurately measure it. Housed in a Class 1, Division 2, NEMA 4X/6P (IP66/IP67) enclosure, the M3000 design has been tested and approved by Factory Mutual (FM) in the United States and the Canadian Standards Association (CSA international) in Canada.

FEATURES

- Sizes 1/4...24 in. (6...600 mm)
- Accuracy of ± 0.20%
- Better than 0.1% repeatability
- Large 4-line by 16-character, back-lit, LCD display
- Digital Signal Processor (DSP) based
- · Bi-directional flow sensing and totalization
- Automatic zero point stability
- Measures fluids with as low as 5.0 micromhos/cm conductivity
- Empty pipe detection
- No pressure loss for low operational costs
- Long life, corrosion-resistant liners
- Precise calibration
- NEMA 4X/6P (IP66/IP67) enclosure
- FM approved for Class I, Div 2 hazardous locations
- CE and FCC compliant
- CSA Certified

Product Data Sheet

SPECIFICATIONS

Sizes	1/424 in. (6600 mm)										
Flow Range	0.1039.4 ft/s (0.0312 m/s)										
Accuracy	± 0.20% of rate ± 1 mm/s										
Repeatability	0.1% of rate										
Power Supply	AC or optional 24V DC										
	AC Power Supply: 85240V AC, 4565 Hz										
	Voltage Fluctuation = ± 10% of nominal										
	Power Consumption = 20 W										
	C Power Supply (optional): 24V DC ± 10% 8 W										
Analog Outputs	010 mA, 020 mA, 420 mA (programmable and scalable)										
	λ Loop resistance = 750 O										
Digital Outputs) Open Collector: (programmable - scaled pulse, flow alarm, status, or frequency output) Max, 24V DC, 0.5 W										
Digital Outputs	.) Open Collector, (programmable - scaled pulse, flow alarm, status, or frequency output) Max. 24V DC, 0.5 W 2) AC solid-state relay (programmable - flow alarm or status) Max. 24V D C @ 0.5 A										
Frequency Output	pen Collector; Max. full scale flow = 10 kHz										
Communication	Modbus RTU communications and display for 110/220V AC (P.N. 65778-007) or 24V DC (P.N. 65778-008).										
	Options must be selected at time of order.										
Pulse Width	Open Collector, 5 ms to 1 second (programmable) or automatic	50% duty cycle									
Min-Max Flow Alarm	Open collector or solid-state relay (programmable, 0 to 100% of flow)										
Empty Pipe Detection	field tunable for optimum performance based on specific application										
Excitation Frequency	Programmable, 3.75 Hz, 7.5 Hz or 15 Hz	Programmable, 3.75 Hz, 7.5 Hz or 15 Hz									
Auxiliary Input	Max. 24V DC (programmable - positive zero return, external totalizer reset or preset batch start)										
Noise Dampening	1 to 30 seconds (programmable)										
Low Flow Cutoff	0100% of full scale (programmable)										
Zero-Point Stability	Automatic correction	Automatic correction									
Galvanic Separation	500V										
Fluid Conductivity	Min. 5 µS/cm (Min. 20 µS/cm for demineralized water)										
Fluid Temperature	With Meter-Mounted Amplifier:	With Remote Amplifier:									
_	PFA, PTFE & Halar®: -4212° F (-20100° C) @ max. ambient										
	Temperature of 122 F (50 C). Hard rubber: 32 178° F (0 81° C) @ max_ambient	Hard rubber: $32 \ 178^\circ F(0 \ 81^\circ C)$ @ max_ambient									
	temperature of 122° F (50° C).	temperature of 122° F (50° C).									
Ambient Temperature	- 4122° F (-2050° C)										
Relative Humidity	Up to 90% non-condensing										
Altitude	Maximum 6500 ft (2000 m)										
Flow Direction	Uni-directional or bi-directional										
Totalization	3 separate displayable totalizers; 10 digits (programmable - forward, reverse and net)										
Units of Measure	J.S. gallons, imperial gallons, million gallons per day, cubic feet, cubic meters, liters, oil barrels, pounds, ounces,										
	Acre feet (programmable).	modbus 485 RTU									
I C Display	4-line by 16-character, alphanumeric, back light										
	Displays: 3 totalizer values, flow rate, alarm status, output status, error/diagnostic messages										
Programming	Internal 3-button or external magnetic wand										
Field Wiring Entry Ports	(3) 1/2 in. NPT, internal thread	(3) 1/2 in. NPT, internal thread									
Amplifier Housing	Amplifier enclosure and remote junction enclosure: cast alumin	um (powder coated paint)									
Amplifier Housing Rating	Amplifier enclosure and remote junction enclosure: NEMA 4X/6P (IP66/IP67)										
Detector Pipe Spool Material	304 stainless steel										
Detector Spool Housing	Carbon steel, welded, NEMA 4X/6P (IP66/IP67)										
Material											
Electrode Materials	Alloy C (standard), 316 stainless steel, gold/platinum plated, tantalum, platinum/rhodium										
Liner Material	PFA from 1/43/8 in. (610 mm), PTFE from 1/224 in. (15600 mm), hard rubber from 124 in. (25600 mm), Halar from 1224 in. (300600 mm)										
Flanges	Carbon steel or 316 stainless steel; In Accordance with ANSI/ASME, B16.5 Class 150 Flange Rating										
Coil Power	Pulsed DC										
Pressure Limits	In Accordance with ANSI/ASME, B16.5 Class 150 Flange Rating										
Mounting	Direct detector mount or remote wall mount, bracket included. For remote mount, max. cable distance = 100 ft (30 m)										
Junction Enclosure Material	For remote mounted amplifier option: Cast aluminum, powder-coated paint, NEMA 4X/6P (IP66/IP67)										
Grounding Ring Material	316 stainless steel (standard) or alloy C										
(optional, 2 required)	Meter Size Thickness (one ring)										
	1/410 in. (6250 mm) 0.135 in. (3.43 mm)										
	1012 in. (250600 mm) 0.187 in. (4.75 mm)										
Optional Grounding Electrodes	Alloy C, 316 stainless steel, gold/platinum plated, tantalum, or p	latinum/rhodium									
Electrical Classification	FM approved for Class I, Div 2, Groups A-D; Class II, Div 2, Groups F and G, - CSA Certified
